

OVERVIEW:

The Ocean Park High Income ETF (the "Fund") has two objectives, to provide total return and to limit exposure to downside risk.

The Fund tactically allocates between higher yielding ETFs, long-term U.S. Treasury ETFs and cash equivalents. The universe of higher yielding ETFs is unconstrained and primarily includes those based on high yield corporate bonds, high yield municipal bonds, emerging market bonds, preferred securities and bank loans.

The Fund applies a proprietary trend following-based strategy that utilizes banded moving averages to generate buy and sell signals. When high yielding ETFs are not in an uptrend, the Fund may invest in long-term U.S. Treasury ETFs if long-term U.S. Treasury ETFs are in an uptrend. Cash equivalents and/or short-term bond funds are held in the absence of uptrends in either higher yielding ETFs or long-term U.S. Treasury ETFs.

There is no guarantee that any investment strategy will achieve its objectives, generate profits, or avoid losses.

Investors should carefully consider the investment objectives, risks, charges, and expenses of the Ocean Park Mutual Funds and Ocean Park ETFs (collectively, "Ocean Park Funds"). This and other information about the Ocean Park Funds are contained in the prospectus and should be read carefully before investing. The prospectus can be obtained by calling toll free 1-866-738-4363 (1-866-RETI-FND). The Ocean Park Funds are distributed by Northern Lights Distributors, LLC, member FINRA/SIPC. Ocean Park Asset Management, LLC is not affiliated with Northern Light Distributors, LLC.

* The Fund has a limited history of operations with an inception date of July 10, 2024.

The performance quoted herein represents past performance. For performance numbers to the most current month end, please call toll-free 1-844-727-1813 or visit our website, oceanparkam.com. Current performance may be lower or higher than the performance data quote above. Past performance is no guarantee of future results and there is no assurance that any strategy will achieve its investment objective. The investment return and principal value of an investment in the ETF will fluctuate, so that an investor's share, when redeemed, may be worth more or less than their original cost.

Net Asset Value (NAV) - The value of an investment fund that is determined by subtracting its liabilities from its assets. The fund's per-share NAV is then obtained by dividing NAV by the number of shares outstanding.

Market Price - The price at which a product or service is bought and sold.

Bloomberg US Aggregate Bond Index - A broad-based flagship benchmark that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, MBS (agency fixed-rate pass-throughs), ABS and CMBS (agency and non-agency).

DISCIPLINED RISK MANAGEMENT

WHEN TO BUY

Trend Following

WHAT TO BUY

Security Selection

WHEN TO SELL

Trailing Stop Discipline

DEFINITIONS & FUND DISCLOSURES:

Trailing Stop Discipline. This proprietary Discipline has the objective of limiting the magnitude for portfolio drawdowns. The Discipline is based on a manual process that defines sell levels/ signals for security holdings in decline, as measured by its price falling below the recent high of its lower band. These are not market orders.

Cash Exposure. In the absence of buy signals, and/or temporarily following a sell signal, portfolios can have exposure to 100% cash and cash equivalent asset classes.

Standard Deviation is a statistical concept used in investment management to measure risk for the variability of return of a fund's performance. A high standard deviation represents greater risk.

Sharpe Ratio uses standard deviation to measure a fund's risk-adjusted returns. The higher a fund's Sharpe Ratio, the better a fund's returns have been relative to the risk has taken on.

Downside Deviation is a risk statistic measuring volatility. It is a variation of Standard Deviation that focuses only upon the "bad" volatility.

Sortino Ratio is a modification of the Sharpe Ratio that differentiates harmful volatility from general volatility by taking into account the Standard Deviation of negative asset returns, called Downside Deviation.

Max Drawdown is an indicator of the risk of a portfolio chosen based on a certain strategy. It measures the largest single drop from peak to bottom in the value of a portfolio (before a new peak is achieved) using month-end data.

The Ocean Park High Income ETF

Investment Objectives: The Fund has two objectives, to provide total return and to limit exposure to downside risk.

Advisory services are offered through Ocean Park Asset Management, LLC, a registered investment adviser ("RIA") regulated by the U.S. Securities and Exchange Commission ("SEC"). The advisory services are only offered in jurisdictions where the RIA is appropriately registered. The use of the term "registered" does not imply any particular level of skill or training and does not imply any approval by the SEC. For information pertaining to the registration status of Ocean Park Asset Management, LLC, please call 1-844-727-1813 or refer to the Investment Adviser Public Disclosure website (www.adviserinfo.sec.gov).

RISKS AND DISCLOSURES:

Each ETF has specific risks and the Prospectus should be carefully read before investing.

ETFs are subject to specific risks, depending on the nature of the underlying strategy of the fund. These risks could include foreign risk, emerging market risk, liquidity risk, sector risk, as well as risks associated with fixed income securities, real estate investments, and commodities, to name a few.

While the shares of ETFs are tradeable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of market stress. ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETF's net asset value. Brokerage commissions and ETF expenses will reduce returns. There is no guarantee that the Fund will achieve its objective.
